

MultiMedia Center

Replace all of your home electronics with the very latest in functionality!

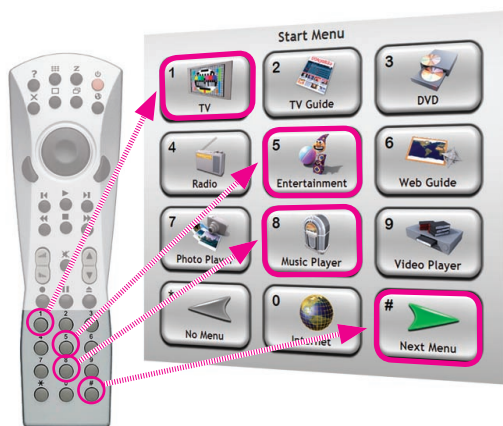

Wellton Way MultiMedia Center (MMC) gives you the opportunity to truly take advantage of the PC's many entertainment and multimedia possibilities. With MMC the whole family can now use a PC - even grandma when she comes for a visit - in the comfort of your living room. MMC gives you the ability to create an incredible information and entertainment centre in your own home.

With MMC installed on a conventional PC, and with a simple remote control you can now replace all the old conventional home electronics normally found in the living room. MMC is also the key in bringing all of the Internet's multimedia possibilities straight into your living room.

MMC provides you with a large number of new and exciting functions, for example the ability to pause the news if the phone rings, or record TV programs straight to the hard drive with the help of a unique TV guide (EPG). For example, you can now, with a simple press of a button, schedule recordings of all coming episodes of the Sopranos. You no longer have to be annoyed by irritating advertising as you can now skip commercial breaks with a simple press of a button. You can let your MMC PC automatically record all coming films with your favourite actor, for example Clint Eastwood. MMC also opens up an entirely new world of on-demand entertainment via the Wellton Way Entertainment Portal. Here you can watch your favourite films and music videos delivered via broadband Internet. Via the Wellton Way Web Guide you can reach all of your favourite websites such as CNN and the Financial Times, all with a simple press of a button. All this and much much more is presented on your ordinary TV or flat screen display in your living room!

It can't get any easier!

The numerical section of the MMC remote control corresponds exactly to what you see on your screen. Press button number 1, and you reach the TV function. Press button number 5 and you access the Entertainment Portal etc. Quick and so easy that everyone understands the concept. It is simple to add new features and menu pages. The # and * buttons are used to navigate between the different menus in the user interface.

Wellton Way MultiMedia Center

Wellton Way MultiMedia Center (MMC) is an ingenious user interface that supports everything a PC can do, without the need for the user to read an instruction manual.

Pause a live TV broadcast or schedule a TV recording to the hard drive.

The music, video and the photo players are used to listen to music and view your favourite films and photos. You can easily switch between button mode and file mode, depending on which you prefer.

Choose your package

Wellton Way MMC is available in three versions; analogue TV, dual analogue TV and digital TV. MMC can be purchased preinstalled on a number of different computer brands, available at your local well-stocked retailer. Wellton Way MMC is also available in a retail package for those customers who wish to upgrade the computer(s) that they have at home. By installing the MMC upgrade package you receive complete MMC functionality with the computer that you already have at home: recording programs to the hard drive, TV guide, music archives etc.

Analogue

Analogue version, provides full MMC functionality for analogue TV.

Dual Analogue

Dual analog version, provides full MMC functionality for analog TV; and enables recording of one TV-program at the same time at which another TV-program is being watched.

Digital

Digital version (DVB-T), provides full MMC functionality for digital TV.

For more information please visit:
www.welltonway.com

Wellton Way MultiMedia Center (MMC) is installed "on top" of Microsoft Windows XP giving all family members easy access to many more functions and features in the comfort of your living room. You no longer have to know how to use an ordinary PC.

Replaces all old home electronics

To replace all of the conventional home electronics (TV, Radio, Video, DVD etc.) normally found in the living room with a PC presents a lot of advantages. One of these being that instead of having 4-8 different remote controls, you only need one piece of home electronic equipment, and one remote control. This one piece of equipment is easier to use, and provides more features and functions, than all of the home electronics that you have at home today.

New functions

MMC contains a wide range of new functions. One of many examples is the fact that it is now possible, with a simple press of a button to pause the TV news when the phone rings. When you finished speaking on the phone, press the play button and the TV news starts again. This feature can also be used to fast-forward annoying commercial breaks.

The electronic TV guide makes it very easy to schedule TV recordings to the hard drive. How many people actually have the energy to set the timer on an ordinary VHS?

It's easy to let MMC automatically record all your favourite TV programs, such as all football matches or all films with Clint Eastwood.

MMC also contains a very useful archive function. The archive function lets you easily categorise, archive and create play lists of all your favourite films, music and photos. These can be reached with the touch of a button on the remote control.

Apart from the usual conventional home electronics functionality, MMC also provides an Entertainment Portal full of on-demand content, here you can rent films and listen to music delivered via the Internet. MMC also gives you access to masses of categorised web pages full of free entertainment and useful information.

Key Features

- 1 Watch TV. Pause live TV
- 2 Schedule TV recordings
- 3 Watch DVD films
- 4 Listen to the radio, on FM or the Internet
- 5 Rent films or other on-demand entertainment content
- 6 A guide to interesting web pages, news sites etc.
- 7 Look at, and organise photos
- 8 Listen to, and organise music
- 9 Watch, and organise movies
- 0 Surf the Internet, just as you're used to
- # Lots of other applications in the MMC submenus
